Ben Philipson
Biomove

February 22, 2007

Dear Ben:

Thank you for the opportunity to examine the Biomove device. I do believe that EMG-triggered external stimulation of the peripheral nervous system holds promise for treatment of motor deficits.

I would suggest that this approach would likely have maximum impact when combined with other forms of behavioral reinforcement for rehabilitation of affected muscles after stroke.

Sincerely,

A handwritten signature in cursive script that reads "Steven C. Cramer".

Steve Cramer
